Excerpt from The New Photography Before trying to explain the discovery of Professor Rontgen - that photographs can be taken through what are commonly called opaque substances - it is essential that I should put before the reader some preliminary facts connected with light and undulatory movements in general. According to the theory of the propagation of light which is at the present time generally accepted, known as the undulatory theory, light consists of wave-like motions taking place in a medium, called the luminiferous ether, which, as far as we know, pervades all space and all sub.
